PROFILE

2027 undergraduate in Information Management and Information Systems at South China Agricultural University. I build inspectable context and agent systems, with an AI engineering internship spanning applied ML, API delivery and evaluation. My work connects product decisions to source code, tests and explicit limitations.

SELECTED PROJECTS

RepoBound

Repository context engineering

See and control the repository context a coding agent receives.

CueParcel

Web context workbench

Pick, organize and deliver webpage context with its source still visible.

Agent Studio

Agent runtime and evaluation

Build, run and inspect tool-using agents from the same execution evidence.

Skin Lesion AI Platform

Internship engineering practice

From a model experiment to a local inference workflow with a visible evaluation boundary.

EXPERIENCE

AI Engineer Intern

Guangzhou Teddy Intelligence Technology Co., Ltd. · 2026.08–09

Built and evaluated a local skin lesion AI application across data, model, inference service and UI. Internal test accuracy was 92.96% (n=270); an independent external evaluation recorded 78.54% accuracy (n=797) and 65.49% malignant recall. This is engineering practice, not a clinical diagnosis product.

CAPABILITIES

Context engineering · Agent runtime · RAG and Memory · TypeScript · Python · FastAPI · React / Next.js · SQLite / PostgreSQL · PyTorch · Playwright · Drawing and visual communication

EDUCATION

South China Agricultural University · BSc, Information Management and Information Systems · Class of 2027 (2023.09–2027.06)
